Type	Application
Series	Puzzle Classics

## → Seek the Bone

That's the way dogs do it: Hiding their bones in the garden, but then they forget where they buried them! Every dog has hidden exactly one bone which is located in a field either right, left, above or below him - never diagonally. Two bones may never lie in adjacent fields, not even diagonally. Numbers at the borders of the grid show how many bones are hidden in each row and column.

- More than 20 years of experience in the puzzle business
- High quality content created by professional puzzle generator software
- Unique solution for every puzzle
- Part of a themed game series called "Puzzle Classics"
- Ergonomically styled and sized user interface
- Integrated auto correct feature
- Haptic vibration feedback
- Support for a wide range of mobile handsets
